

A FULL RANGE OF LUXURIOUS FINISHES TO SUIT ANY KITCHEN DESIGN AND BUDGET.

HÄFELE HOME

Sinkware

STAINLESS STEEL, CERAMIC AND COLOURED QUARTZ SINKWARE RANGE.

WELCOME

Innovation for the heart of your home.

**German innovation that has been at the heart
of homes around the globe since 1923.**

Our family business has been helping people to make more of their homes for over 90 years. Established in Germany and now operating all over the world, the name Häfele is famous for innovation, quality and engineering. Our fittings, and hardware improve the way that kitchens work in every way possible.

In choosing Häfele, you are benefitting from decades of specialist knowledge and experience brought to life through ideas that will enhance your experience of your home everyday - and for many years to come: Ideas from Häfele are built to last.

HÄFELE COLLECTION SINKS | 732.04.429 | V4. MAR 2025.

Care instructions specific to your sink finish.

Coloured Quartz Sinkware

FASHIONABLE CLASSIC WITH A RUGGED FINISH.

Our range of stunning coloured Quartz sinkware is handmade in Germany from 80% Quartz and 20% Acrylic. Coloured Quartz sinkware is designed to last in your hard-working kitchen - with heat, scratch and stain resistant properties to ensure it looks good for years to come.

Sink surfaces
that are anything
but surface deep.

Heat Resistant.
Not temperature sensitive.

Impact Resistant.
Tough & resistant material.

Dirt Repellent.
The dirt simply rolls off.

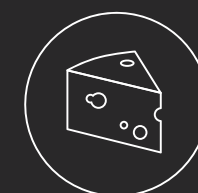

Food Stains
Food stains less permanent.

Made to Last.
Extremely durable.

Food Safe.
Absolutely safe & healthy.

Odour Free.
Leaves the surface
free of smells.

Hygienic.
Non-porous finish leaves no
place for bacteria to thrive.

COLOURED QUARTZ.

Manufactured from quality engineered Quartz composite material, **Quadro** sinks are specially developed for the demands of the kitchen with scratch, stain and heat-resistant properties.

Formhaus

COLOURED QUARTZ SINKWARE DESIGNED TO LAST.

Stainless Steel Sinkware

DESIGNED FOR THE HEART OF YOUR HOME.

The design and innovation of Häfele's range of sinks provides choice, style and functionality to any kitchen, traditional or modern. Our range strikes the delicate balance between eye-catching aesthetics and robust durability. Whether your kitchen is used for catching up on emails or weekend dinner parties, Häfele's range of sinks will last the distance.

Sink surfaces
that are anything
but surface deep.

Undermount Sinks.

Best suited for solid surface benchtops. The modern minimalist finish is easy to clean, just wipe food scraps straight from the bench to the sink.

Top Mount Sinks.

Also known as over mount, these are easy to install & can be used with any benchtop material. Top mount sinks are more visual making the sink the focal point.

Overflow.

Comes as a standard safety feature, allowing water to drain away if the waste is blocked and water is running.

Designer Waste.

Basket waste included when you purchase any sink. The removable steel strainer lifts out to remove scraps.

Easy Clean Radius.

All sinks have a minimum 10mm internal radius making them easy to clean.

Reversible.

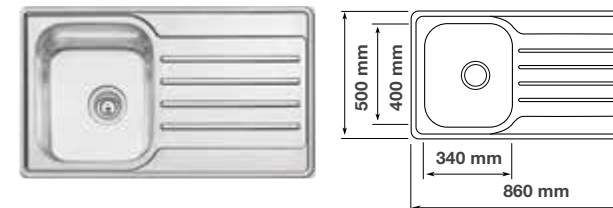

Sinks which are reversible can be mounted with the bowl facing to the left or right, making them a versatile choice.

STAINLESS STEEL.

Abbey is a European designed, high quality stainless steel sink that offers a spacious draining area, large bowl and optimal functionality.

Sink surfaces
that are anything
but surface deep.

Heat Resistance.
Ceramic is excellent at
withstanding the residual
heat from pots and pans
taken directly from cooking.

Scratch Resistant.
Fireclay Ceramic sinks are
scratch & chip-resistant due to
the heavy-duty glazed surface.

Dirt Repellent.
The extremely smooth
surface of ceramic is
easily cleaned.

Stain resistant.
Food stains cannot stick,
with adequate and routine
cleaning practices.

Made to Last.
Extremely durable.
Fireclay ceramic is far
superior to porcelain.

Generous Depth.
With bowl depths of 220mm
Farmhouse butler sinks are
ideal for washing up pots &
pans and larger dishes.

Ceramic Sinkware

A FARMHOUSE COLLECTION DESIGNED
FOR THE HEART OF YOUR HOME.

Create a statement in your kitchen with
a Butler's sink. Spacious and elegant by
design, these sinks make washing up a
breeze. Made from fireclay ceramic these
sinks are built to last the test of time.

FIRECLAY CERAMIC.

Farmhouse is a European designed, high quality ceramic sink collection that offers a spacious bowl and timeless elegance in your kitchen.

Our range of butler sinks are hand finished and have a tolerance of +/- 5mm. Sizes given are only a guide, so ensure you have the butler sink you are going to use available, in order to check the exact dimensions before making any cuts in your kitchen cabinetry and tops. Contains a blend of 100% natural raw materials with antibacterial properties.

Day to Day Care and Cleaning

Cleaning and care of your coloured stone sinkware is easy and uncomplicated. A little water, a sponge and some washing-up liquid is all you need to remove minor stains, greasy marks and the usual signs of wear. After every use - simply rinse and wipe the sink dry with a clean, soft cloth to eliminate any water spots or soap film build-up.

Stains and Minor Scuff Marks

To remove stains and minor scuff marks - simply use some washing up liquid with a soft nylon scouring pad. A solution of 50% bleach, 50% water may be used for stubborn stains only. Let the solution sit in the bottom of the sink for 30 mins, then scrub lightly with a sponge. Rinse well. (Note: Dark coloured sinks must be rinsed thoroughly with hot water.)

Lime Scale or Calcium Deposits

Lime scale is the deposits left behind by hard water. It is the chalky white deposits that stick to and build up on any surface that comes into contact with the hard water. These can be carefully treated by using warm vinegar. Soak the area for 20mins by misting on with a spray bottle, rinse well with water and finish off with warm soapy water and a soft cloth. You may need to reapply for more stubborn deposits.

Caution

Do not use;

Any abrasive cleaning agents or scrub pads such as steel wool.

Any concentrated form of Bleach or Hydrochloride base products.

Any commercial alkalis, such as ammonia and or caustic solutions.

Any drain blocking chemicals that involve filling the sink with water.

The sink for cleaning paint or grout materials.

Anything highly corrosive.

Anything hot enough on the surface that may cause thermal shock discolouration or damage, this could include pots from a stove top or oven. Always use a heat mat.

Installation

It is a requirement that all undermounted sinks be installed by a professional or qualified benchtop manufacturer. Failure to do this will void the warranty. All templates are supplied only as a guide. The physical use of the sink will ensure a more accurate cut-out. For information on installation instructions for solid surface, granite, marble, stone or engineered countertop surfaces, contact your fabricator or benchtop manufacturer.

Day to Day Care

After use, wipe the stainless steel sink surface with a soft damp cloth and rinse with water. In hard water areas, an application of Inox will help avoid any build-up of waterborne deposits. Although Stainless Steel is an extremely durable material and will withstand a great deal of heavy use, it can be scratched by hard or sharp objects. To keep the surfaces blemish free condition, reasonable care should be taken when handling such items.

Caution

Certain household products contain substances which will damage the Stainless Steel surface, they are:

1. Bleaches

Most common domestic bleaches contain Chlorine in the form of hydro chloride. Chlorine attacks the Chromium Oxide film on the surface and can cause pitting. Undiluted bleaches can cause surface pitting and staining. Bleach should be immediately rinsed off with plenty of water. All cleaning agents containing hydro chloride are unsuitable for use with stainless steel, even highly diluted these can cause pitting. It is strongly recommended that the sink is not used for soaking or cleaning clothes in hydrochloric solutions.

2. Chemical Storage:

Chemicals including hydro chlorides should not be stored in the cabinet under your sinkware. Even closed containers leach corrosive vapours. Your bowl will be damaged, this will affect your warranty.

3. Silver Dip Cleaners:

These are particularly harmful since they contain strong acids which can cause discolouration and pitting. The first sign of this is an iridescent rainbow stain which turns an etched dull grey colour. Should any Silver Dip Cleaner come into contact with the surface of the stainless steel it should be immediately rinsed off with plenty of water.

4. Corrosive Foodstuffs:

Fruit juices, damp salt, vinegar and ready-made mustards, pickle and mayonaise can cause pitting and corrosion if left in contact with the stainless steel surface.

5. Acids:

Sulphuric, Hydrochloric and other strong acids will cause pitting corrosion, as will photographic developing liquids. All should be immediately washed off with plenty of water if contact occurs.

Cleaning

Always use a soft cloth. The use of coarse grit, scouring powders or soap filled wire wool cleaning pads is not recommended, both will mark the stainless steel surface. Wire wool pads leave tiny fragments of wire embedded in the surface and these can rust and leave small brown rust stains. Vigorous rubbing with a soft cloth and neat detergent will remove these stains. Always remove wet cleaning aids (cloth, containers etc) from the surface after use in order to avoid the formation of water marks.

Installation

It is a requirement that all undermounted sinks be installed by a professional or qualified benchtop manufacturer. Failure to do this will void the warranty. All templates are supplied only as a guide. The physical use of the sink will ensure a more accurate cut-out. For information on installation instructions for solid surface, granite, marble, stone or engineered countertop surfaces, contact your fabricator or benchtop manufacturer.

Coloured Stone Care

The surface of the CRISTALITE® sink is slightly rough and feels like stone. In fact, the robust composite sinks made of 70-75% natural quartz sand – the hardest constituent of granite – is not only rock hard, but you can even repair it yourself if something should happen. Water and a little washing-up liquid however are all it takes to clean our sinks from the normal everyday challenges they face.

Stainless Sink Care

The design and innovation of Häfele's range of sinks provides choice, style and functionality to any kitchen, traditional or modern. Our range strikes the delicate balance between eye-catching aesthetics and robust durability. Whether your kitchen is used for catching up on emails or weekend dinner parties, Häfele's range of sinks will last the distance.

Day to Day Care

As the glazed surface is extremely smooth and non-porous, cleaning with soapy water is usually all that is required to keep your sink clean.

More stubborn stains can be removed using a sensitive acid free cleaner. Always wipe down with a dry towel or microfibre cloth after use, this will help to avoid any lime scale build-up or staining.

Caution

Avoid using plastic washing-up bowls, as particles of grit can get into the base of the bowl and act like sand paper, causing permanent scratching to the glazed surface.

1. Bleaches & Acids:

The ceramic surface will not be affected by bleach or acids found in the kitchen, however, it is advisable to use only diluted bleach in or on the sink, this is because the chrome wastes and taps can be damaged by extended exposure to neat bleach.

2. Stains:

If stains become particularly difficult to remove, an overnight soak using a biological washing powder should help remove any marks.

3. Limescale:

In hard water areas limescale can build-up on the surface and become visible when stained by food and drink. We recommend regular cleaning with a solution of 3-parts hot water and 1-part white vinegar or specific limescale cleaners can be used.

4. Metal Marks:

Pans and cutlery can leave grey metal marks on the surface as the glazed finish is much harder than the metal utensils used in the kitchen. These marks can be easily removed using our recommended Cramer-Bath and Kitchen Rubber.

5. Heat Resistance

Ceramic sinks are highly heat resistant and can withstand the residual heat from pots and pans taken directly from the oven or hob.

Cleaning

Always use a soft cloth. The use of coarse grit, scouring powders or soap filled wire wool cleaning pads is not recommended, both will mark the ceramic surface. Wire wool pads leave tiny fragments of wire embedded in the surface and cause permanent scratching. Vigorous rubbing with a soft cloth and neat detergent will remove these stains. Always remove wet cleaning aids (cloth, containers etc) from the surface after use in order to avoid the formation of water marks.

Installation

It is a requirement that all undermounted sinks be installed by a professional or qualified benchtop manufacturer. Failure to do this will void the warranty. All templates are supplied only as a guide. The physical use of the sink will ensure a more accurate cut-out. For information on installation instructions for solid surface, granite, marble, stone or engineered countertop surfaces, contact your fabricator or benchtop manufacturer.

WARRANTY.

Our warranty covers any HäfeleHome sinks due to manufacturing defects within 20 years from the date of purchase. The warranty does not cover normal wear and tear, accidental damage, scuff, scrapes or dents, improper installation or care. The owner must follow and use the care and cleaning instructions provided. Accessories and waste fittings are not included in this warranty. Proof of purchase must be provided.

Ceramic Sink Care

Every ceramic sink is unique - this is due to the natural clay material used and the imprecise process of firing. Therefore, it is impossible to avoid small imperfections, additionally minor tolerances in the dimensions stated should be expected.
